

Maxima 14

(Cherry Rootstock)

Trademarked as Maxma® 14 in USA – This hybrid rootstock is a result of a cross between Mazzard and Mahaleb. It is rated in vigor as 20-25% more dwarfing than Mahaleb. This lends itself to higher density plantings. Maxma® 14 is compatible with most cherry varieties and is quite precocious and productive. It is considered to be one of the leading rootstocks in use in Europe. Maxma® 14 rootstock is tolerant to wet soils and is resistant to iron chlorosis.
